

The JAF P Series is the perfect choice for many of your air filtration requirements. Our air filters are designed for critical filtration applications, providing long service life, high rates of flow and low pressure drops.

Available with a full range of standard and custom design solutions, our high quality air filter panels are proven to enhance maintenance operations while increasing operating efficiencies. Improved air filtration means increased equipment protection and outputs, as well as decreased fouling and maintenance costs.

JAF Panel Filters

Dimensions

Length	4.0 to 61.0	inches
Width	4.0 to 40.0	inches
Thickness	1.0 to 6.0	inches

** Above dimensions are nominal in*

The JAF design is provided with air flow direction labels to insure the proper installation every time. Intake and exhaust sides can be protected with expanded metal and pleat stabilization achieved with bonded metal bands. Variable types of gaskets and sealants can be adapted to meet custom requirements.

Materials

- Media:** Cellulose, K-Media, Polyester, Polypropylene
- Pre Layer:** Foam, Polyester
- Frame:** Galvanized Metal, 304, 316, Stainless Steel
- Supports:** Galvanized Metal, 304, 316, Stainless Steel
- Screen:** Galvanized Expanded Metal, Tin, 304, 316 Stainless Steel
- Gaskets:** Fiberglass, Buna, Neoprene, Viton, Silicon, PTFE, rubber sponge

** Custom and Specialty replacements available*

JAF P SERIES

Performance

Frazier Rating	14 to 200 cfm
Maximum Temperatures	300° F
Pleat height	0.375 to 6.00 inches
Flow Direction	Front to Back
Basis Weight	80-92

* Basis weight is for Paper type media

Jonell can build standard replacements and custom panel filters to help with the toughest requirements. A full range of media and PRE-medias are available for use in the JAF P series.

In addition to the industry standard ø80/20ö media, a variety of durable, moisture resistant, premium grade medias are available.

Please note that all air filter media is not the same and customers should consult the factory for proper element and media selection in order to attain optimal life and efficiency characteristics.
